

SmartBand:

**An Arduino-Powered Wristband
To Keep Kids Safe**

Shivani Nanda

Grade 7, Takoma Park Middle School, Silver Spring, MD 20910

Purpose of the SmartBand

To address the safety issues/problems related to young kids walking alone to and from school.

Design Requirements of Building a SmartBand

- Developing a prototype of the SmartBand for the safety of kids using *Arduino microcontrollers*.
- The SmartBand should be able to:
 - Vibrate (For the user to know the SmartBand is on)
 - Flash Lights (To alert the bystanders)
 - Make Noise (To alert the bystanders)
 - Send the Geolocation (For the Parents/Guardians/Police)
 - Make a Distress Call (For the Parents/Guardians/Police)
- It should be:
 - Cheap
 - Affordable
 - Easy to Operate

Materials Used

- LilyPad Arduino USB - ATmega32U4 Board

- LED Lights

- LilyPad Buzzer

- Alligator Clips

- LilyPad Vibe Board

- Conductive Thread

- Wrist band

- ESP8266 Wifi Bee (Arduino Compatible)

- E-Textiles Battery

- SoftwareSerial + ESP8266 libraries

- Flask library

- Google Geolocation API

Functionality Testing

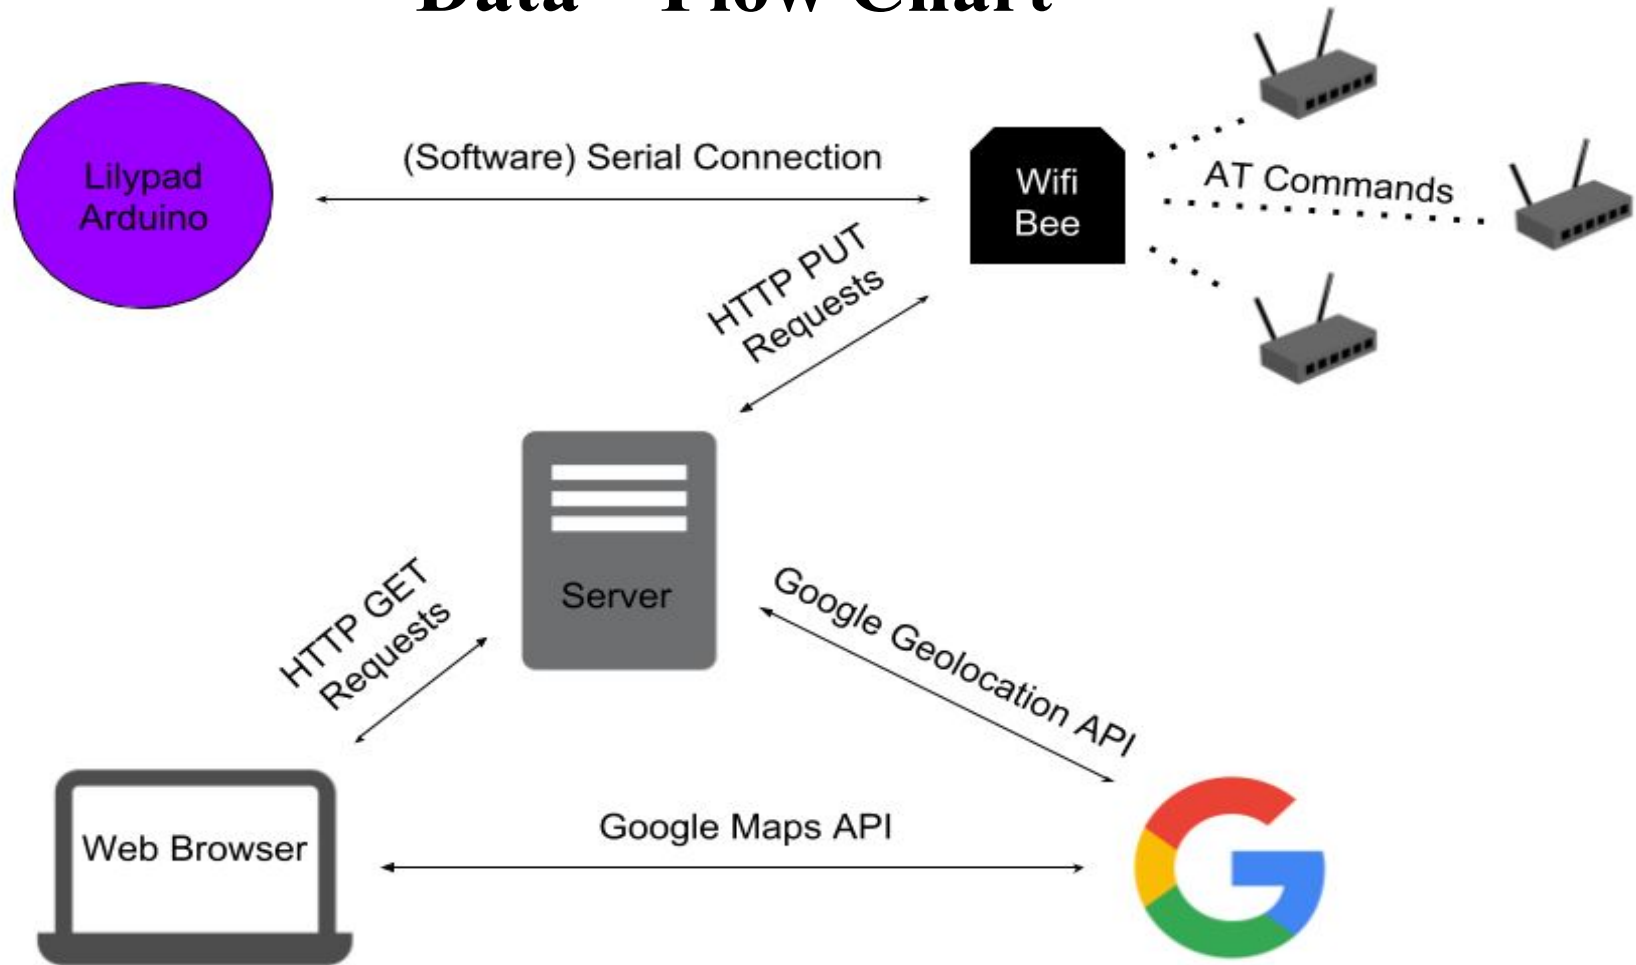

A custom-built circular circuit board, likely a Raspberry Pi Zero, is mounted on a white, textured felt pad. The board is purple and features a USB cable connected to its top. Four LEDs are mounted on the board: two red LEDs at the bottom right and two blue LEDs at the bottom left. The board has several pins and components labeled, including 'A1', 'A2', 'A3', 'A4', 'A5', 'A6', 'A7', 'A8', 'A9', 'A10', 'A11', 'A12', 'A13', 'A14', 'A15', 'A16', 'A17', 'A18', 'A19', 'A20', 'A21', 'A22', 'A23', 'A24', 'A25', 'A26', 'A27', 'A28', 'A29', 'A30', 'A31', 'A32', 'A33', 'A34', 'A35', 'A36', 'A37', 'A38', 'A39', 'A40', 'A41', 'A42', 'A43', 'A44', 'A45', 'A46', 'A47', 'A48', 'A49', 'A50', 'A51', 'A52', 'A53', 'A54', 'A55', 'A56', 'A57', 'A58', 'A59', 'A60', 'A61', 'A62', 'A63', 'A64', 'A65', 'A66', 'A67', 'A68', 'A69', 'A70', 'A71', 'A72', 'A73', 'A74', 'A75', 'A76', 'A77', 'A78', 'A79', 'A80', 'A81', 'A82', 'A83', 'A84', 'A85', 'A86', 'A87', 'A88', 'A89', 'A90', 'A91', 'A92', 'A93', 'A94', 'A95', 'A96', 'A97', 'A98', 'A99', 'A100'. The board is connected to a USB cable and has four LEDs (two red, two blue) mounted on it. The board is mounted on a white, textured felt pad.

WiFi Connectivity of Microcontroller

Validation of
Concept - 2

Challenges Encountered

- The Arduino ports were labelled wrong on the microcontroller.
 - In the future I will make sure to check the port connectivity to the correct pin on the Arduino microcontroller.
- It is always good idea to check the functionality of each component separately with the Arduino microcontroller using the alligator clips.

Existing Solutions vs. SmartBand

hereO

hereO V2 GPS Watch for Kids- Lemon

1 customer review

Price: **\$171.90** FREE Shipping for Prime members

- Existing solutions are prohibitively expensive
- Technically challenging for operations by kids
- Need apps, smartphones & monthly payments

Best for Kids with Disabilities

AngelSense Kids GPS Tracker

Guardian Kit	\$229	\$99
Service Plan*	\$44.99	\$39.99 /mo
Activation	\$25	FREE
Shipping		FREE
Total Payment		\$138.99

30-DAY MONEY BACK GUARANTEE

- Cheap & affordable
- Easy to operate with flip of a switch

Cost Estimate

LilyPad Arduino USB	\$ 24.95
WiFi Bee	\$ 5.90
Wristband	\$ 0.50
Battery	\$ 6.95

Future Directions

- Buzzers will be replaced with high pitch speakers
 - Sound alert will be replaced with police siren
 - Geo location will be replaced with GPS tracker
- Arduino GSM Shield will be added to enable voice calls
 - Sharing of GPS coordinates with parents, guardians and/or police while in distress
